DETAILED ACTION

Election/Restrictions

1. Claims 37-50 are pending in the instant application.
2. Claims 37, 38, 44, and 45 are objected to as reciting an improper Markush Group. MPEP

803.02 states that

“Since the decisions in *In re Weber*, 580 F.2d 455, 198 USPQ 328 (CCPA 1978) and *In re Haas*, 580 F.2d 461, 198 USPQ 334 (CCPA 1978), it is improper for the Office to refuse to examine that which applicants regard as their invention, unless the subject matter in a claim lacks unity of invention. *In re Harnish*, 631 F.2d 716, 206 USPQ 300 (CCPA 1980); and *Ex parte Hozumi*, 3 USPQ2d 1059 (Bd. Pat. App. & Int. 1984). Broadly, unity of invention exists where compounds included within a Markush group (1) share a common utility, and (2) share a substantial structural feature disclosed as being essential to that utility.”

Applicant is advised that claims 37, 38, 44, and 45 are each improper Markush claims because the plurality of amino acid sequences recited in these claims lack a common utility which is based upon a shared structural feature lacking from the prior art. Each of these amino acid sequences are independent and distinct chemical compounds lacking either a common structural property which distinguishes them as a group from structurally related compounds of the prior art or which provides them with a common utility which is lacking from those prior art proteins or nucleic acids. Therefore, restriction to one of the following inventions is required under 35 U.S.C. 121:

I to XXV. Claims 37-50, in so far as they are drawn to **any one** of the twenty five amino acid sequences and a method of producing an antibody to any one of the twenty five amino acid sequences recited therein, classified in class 530, subclass 30. For

Art Unit: 1646

example, Invention I consists of claims 37-50 only in so far as they encompass an amino acid sequence of SEQ ID NO:1, residues 44-49. Invention XXV consists of claims 37-50 only in so far as they encompass an amino acid sequence of SEQ ID NO:1, residues 353-362.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I to XXV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the amino acid sequences that are inventions I to XXV are twenty-five different chemical compositions each of which can be made and used without each other. Lack of unity is shown by the fact that these twenty-five different compositions lack a common utility based upon a shared structural feature lacking from the prior art.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, recognized divergent subject matter and non-coextensive literature searches, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1646

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
